

PROJECT REPORT

INTRODUCTION:

Architecturally JSP may be viewed as a high level abstraction of Java . JSP pages are loaded in the server and are operated from a structured special installed Java

OVER VIEW:

Empathy map[class Room] Brainstorming [class Room]and class Room Post

PURPOSE:

Jsp allows Java code and certainly pre-determined action to be interleaved with static web markup content with the resulting page being compiled and executed on the server to deliver an HTML

CONCLUSION:

This software is efficient in maintaining students details and can easily perform person operation on a student record. This software also reduces the workload of the teacher in school .
